## COLOCATION AT CIBICOM

With the colocation of your equipment at Cibicom, your infrastructure will be housed in some of Denmark's most secure data centres. Cibicom's data centres are connected via our redundant fibre infrastructure, to enable the geographical separation of servers for 2-centre operation, among other things.

At Cibicom you can move directly into our power and network-prepared racks or you can have your own cage, room or hall, depending on your wishes and needs. Cibicom's data centres are carrier and cloud neutral, so you are free to choose any network operator or providers.

The data centres are monitored by our 24-hour NOC, and we can offer a nationwide Hands & Eyes service to perform front services. The service can either be as an emergency service in case of critical errors or as part of planned work.

### CIBICOM OFFERS:

- Colocation in 2 data centres built according to Tier 3 requirements
- Leased rack - own cage, room or hall
- Power Distribution System for increased redundancy
- Possibility of operation in geographically separated data centres
- Fire extinguishing with gas (reduced noise)
- Smoke detection
- Leak detection
- Access to parking, workplaces and kitchenettes
- Hands & Eyes service
